

## Experiment 8

**Student Name:** Sikander Singh Nanglu

**UID:** 22BET10031

**Branch:** BE-IT

**Section/Group:** 22BET-IOT-701/A

**Semester:** 6

**Date of Performance:** 28/3/2025

**Subject Name:** AP2

**Subject Code:** 22ITP-351

**1.Aim:** Implement the following problem:- Max Units on a Truck, Min Operations to make array increasing, Remove stones to Maximize total, Max Score from removing substrings, Min operations to make a subsequence, Max number of tasks you can assign.

**2.Objective:** To optimization problems using greedy, dynamic programming, or sorting techniques to maximize or minimize a given value under constraints.

### 3.Implementation/Code:

#### Max Units on a Truck

```
class Solution {
public:
    int maximumUnits(vector<vector<int>>& boxTypes, int truckSize) {
        sort(boxTypes.begin(), boxTypes.end(), [](vector<int>& a, vector<int>& b) {
            return a[1] > b[1];
        });
        int totalUnits = 0;
        for (auto& box : boxTypes) {
            int count = min(box[0], truckSize);
            totalUnits += count * box[1];
            truckSize -= count;
            if (truckSize == 0) break;
        }
        return totalUnits;
    }
};
```

## Minimum Operations to Make the Array Increasing

```
class Solution {
public:
    int minOperations(vector<int>& nums) {
        int operations = 0;
        for (int i = 1; i < nums.size(); i++) {
            if (nums[i] <= nums[i - 1]) {
                operations += (nums[i - 1] - nums[i] + 1);
                nums[i] = nums[i - 1] + 1;
            }
        }
        return operations;
    }
};
```

## Remove Stones to Minimize the Total

```
class Solution {
public:
    int minStoneSum(vector<int>& piles, int k) {
        priority_queue<int> maxHeap(piles.begin(), piles.end());
        while (k--) {
            int top = maxHeap.top();
            maxHeap.pop();
            maxHeap.push(top - top / 2);
        }
        int total = 0;
        while (!maxHeap.empty()) {
            total += maxHeap.top();
            maxHeap.pop();
        }
        return total;
    }
};
```

## Maximum Score From Removing Substrings

```
class Solution {
public:
    int maximumGain(string s, int x, int y) {
        swap(x, y);
        reverse(s.begin(), s.end());
    }
    int score = 0;
    stack<char> st;
    for (char c : s) {
        if (!st.empty() && st.top() == 'a' && c == 'b') {
            st.pop();
            score += x;
        }
    }
    return score;
};
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
} else {
st.push(c);
}
}
string remaining;
while (!st.empty()) {
remaining += st.top();
st.pop();
}
reverse(remaining.begin(), remaining.end());
for (char c : remaining) {
if (!st.empty() && st.top() == 'b' && c == 'a') {
st.pop();
score += y;
} else {
st.push(c);
}
}
return score;
}
};
```

## Minimum Operations to Make a Subsequence

```
class Solution {
public:
int minOperations(vector<int>& target, vector<int>& arr) {
unordered_map<int, int> indexMap;
for (int i = 0; i < target.size(); i++) {
indexMap[target[i]] = i;
}
vector<int> lis;
for (int num : arr) {
if (indexMap.count(num)) {
int idx = indexMap[num];
auto it = lower_bound(lis.begin(), lis.end(), idx);
if (it == lis.end()) {
lis.push_back(idx);
} else {
*it = idx;
}
}
}
return target.size() - lis.size();
}
};
```

## Maximum Number of Tasks You Can Assign

```
class Solution {
public:
    bool check(vector<int>& tasks, vector<int>& workers, int pills, int strength,int index)
    {
        multiset<int> st;
        for(auto it:workers)
        {
            st.insert(it);
        }
        for(int i=index-1;i>=0;i--)
        {
            auto it=st.lower_bound(tasks[i]);
            if(it!=st.end())
            {
                st.erase(it);
            }
            else
            {
                if(pills<=0)
                {
                    return false;
                }
                else
                {
                    it=st.lower_bound(tasks[i]-strength);
                    if(it!=st.end())
                    {
                        st.erase(it);
                    }
                    pills--;
                }
            }
            else
            {
                return false;
            }
        }
        return true;
    }
    int maxTaskAssign(vector<int>& tasks, vector<int>& workers, int pills, int strength) {
        sort(tasks.begin(),tasks.end());
        sort(workers.begin(),workers.end());
        int low=0;
        int high=min(workers.size(),tasks.size());
        while(low<high)
        {
            int mid=(low+high+1)/2;
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

## 5.Learning Outcomes:-

- Ability to analyze problems, evaluate information, and make logical decisions.
- Capability to identify, understand, and develop solutions to complex issues.
- Proficiency in expressing ideas clearly, both verbally and in writing
- Willingness to learn new skills and adjust to changing environments.
- Ability to work effectively with others in diverse environments.
